DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 1/31/2008 has been entered.
2. Claims 2-14 and 16-41 are currently pending in the application. Claims 34-41 are newly added.

Allowable Subject Matter

3. Claims 2-14 and 16-41 are allowed.
4. The following is an examiner's statement of reasons for allowance:

The closest reference, Scott (US 6,522,642), teaches a method for multiplexing and demultiplexing plurality of signals, wherein the demultiplexer comprises a splitter, correlators, and filters associated with each correlators.

Another closest reference, LoCascio et al. (newly cited US 2002/0196497), teach a demultiplexor comprising a 1xN splitter, delay elements for adding delay based on time slot, and amplifiers for amplifying signals.

However, regarding claims 2 and 16, Scott and LoCascio et al. fail to teach the claimed features of:

An apparatus for processing N number of input signals having a common frequency and chip rate, wherein the demux element include N-1 splitters, a delay element associated with each splitter, each delay element having one or more switches for switching in a delay dependent on the chip rate, and a phase discriminator associated with each delay element.

Regarding claim 27, Scott and LoCascio et al. fail to teach the claimed features of:

An apparatus for processing N number of input signals having a common frequency, wherein the demux element including cascading stages, with each stage comprising:

a delay element having one or more switches, the delay element adding a differential amount of delay between the two signals for filtering outputs of the splitter into odd and even groups of frequencies, the amount of differential delay dependent on the modulation rate used to modulate the N modulated input signals; and
a phase discriminator for grouping the odd and even frequencies.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
